Scope of Articles

Cell publishes reports of research of exceptional significance in any area of biology. Papers will be considered for publication only if they report novel results of interest to a wide audience. *Papers should be as brief as possible and should occupy between 2 and 10 published pages; authors should not expect to present more than one paper in an issue.*

Editorial Offices

Authors in the United States should submit to the Principal Office, and authors in Europe to the European Office.

Time of Publication

We try to let authors have reviewers' comments within two to three weeks. Papers that do not conform to the general criteria for publication in *Cell* will be returned immediately to authors, without detailed review, to avoid unnecessary delay in submission elsewhere. Articles will be published within 12 weeks of acceptance. When papers are accepted subject to revision, only a single revised version will be considered, and must be submitted within six weeks of the acceptance in principle.

Submission of Manuscripts

One original and two copies of each manuscript should be submitted. Where appropriate, original photographs should be provided with each copy. When a submitted manuscript is closely related to papers that are in press or have been submitted elsewhere, it will be considered for publication in *Cell* only after copies of these papers also have been provided. *Under no circumstances will any paper be considered for Cell that contains any data that have been or will be submitted for publication elsewhere (including symposium volumes).* Nor will any paper appear in *Cell* if the authors communicate the results to the national press or comparable media before the expected date of publication.

Organization of Manuscripts

The Summary must be a single paragraph of no more than 120 words. The Results and Discussion sections may be subdivided by further headings or may be combined. Experimental Procedures follow the Discussion. Any tables and legends to figures should be typed as separate sections, following the style of the journal. Footnotes should not be used. The entire manuscript should be typed with double spacing (including table legends and references). Ten published pages of *Cell* correspond to a principal text (title through Discussion) of 17 typed pages, accompanied by <7 single-column figures. Manuscripts typed on dot-matrix printers are not acceptable. In addition to the full title, a running title of less than 50 characters should be supplied.

Only genetic loci should be italicized; journal names and Latin phrases and names will be set in Roman type. Any nonstandard abbreviations should be defined in the text when first used.

Typesetting from Disk

It will speed publication when manuscripts can be typeset directly from authors' floppy disks. It is preferable if the disk is formatted under MS-DOS (PC-DOS), but we can also handle other formats, including Macintosh. We can handle files saved in most word processor programs. Please indicate which word processor was used to generate the file, the type of computer, and the operating system. With a Macintosh computer, please save the file in the MS-DOS compatible option, if one is available.

References

Only articles that have been published or are in press may be included in the references. Authors are encouraged to rely as far as possible upon citation of articles published in primary research journals. Unpublished results (including articles submitted for publication) or personal communications should be cited as such within the text. Personal communications should be substantiated by a letter of permission. Abstracts of papers presented at meetings may not be cited.

Illustrations and Cover Art

A set of original drawings or photographs should be provided for reproduction of the figures. Original photographs should preferably be cropped to the final intended width, and be no larger than 12 inches by 10 inches. *All figures will be set to a width of 3 inches unless the authors indicate that a greater width should be used* (these distances include any lettering on the vertical axes). Nucleic acid sequences should be presented as glossy prints or original typescripts. It is preferable for magnifications to be indicated by means of a bar on the photograph. Color figures will be included only when in the reviewers' opinion they are essential, and subject to the author's agreement to defray part of the cost, at a charge of \$1250 per page.

Black and white or color prints (no slides), 5 inches by 7 inches or larger, will be considered for reproduction on the cover. Cover art should accompany submitted manuscripts, and a short descriptive summary should be included.

Proofs

Page proofs should usually be received about eight weeks after acceptance of an article. *It is necessary to regard submitted manuscripts as final texts to which no changes should be made at the proof stage apart from correction of printer's errors.*

Distribution of Material

Publication of a research article in *Cell* is taken to imply that the authors are prepared to distribute freely to interested academic researchers for their own use any clones of cells or DNA or antibodies, or other similar materials, used in the experiments that have been reported. Authors may be required to make primary data available to the Editor in cases of dispute. Nucleic acid and protein sequences published in *Cell* should be deposited in the appropriate data bank.
